RoboCup soccer project objective:

*"By the year 2050, develop a team of fully autonomous humanoid robots that can win against the human world soccer champion team."*

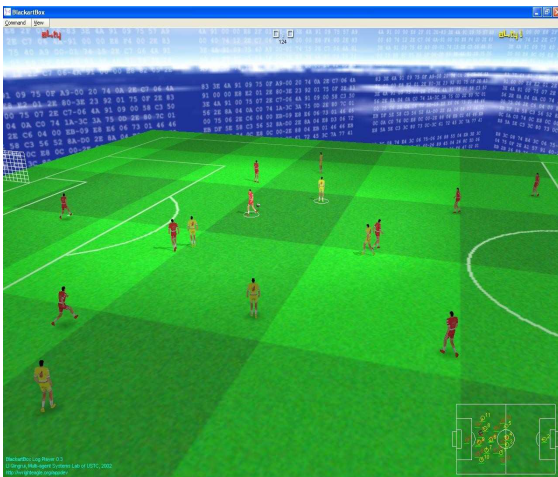

## Project Overview:

RoboCup is a competition for simulated and robotic football where the players are controlled using AI programs. The aim of this project is to automatically generate commentaries for RoboCup games, and play these alongside the game in real time using speech synthesis.

The project consists of:

- Reviewing the small amount of existing work in this area
- Developing a program
- Evaluating the success of the program

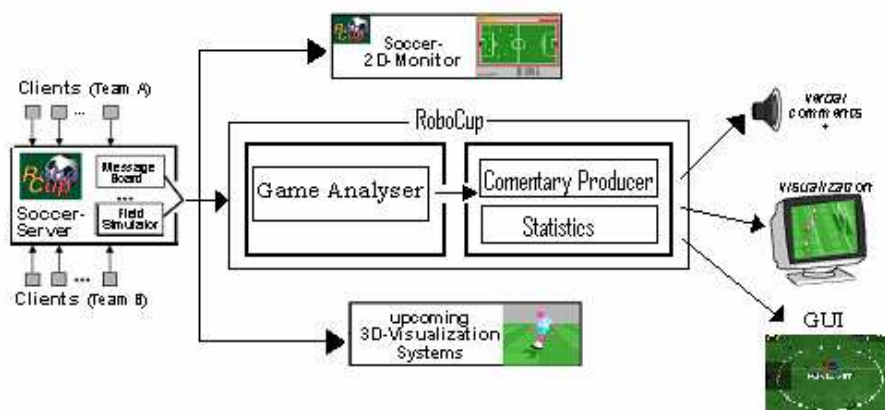

## Our system:

Soccer Server Monitor
